PROJECT PLAN

The plan behind *the page.*

A working sitemap, design system, content checklist and compliance plan for the Aetheria Events website — including what is finished, what needs a decision, and what must happen before launch.

CLIENT	SCOPE	BUILD
Aetheria Events	Marketing site + booking + sample invitation	React 19 + Vite

VERSION	STATUS
1.0 · 30 October 2026	Ready for review

01 · OBJECTIVES

What the site has to do.

The website is a sales tool and a trust document. It should make the service feel expensive and calm, answer the questions that stall a booking, and capture the request without asking too much.

Convert

One obvious path from curiosity to a booking request. Package prices visible immediately, a form that takes minutes, and a live estimate so nothing is a surprise.

Reassure

Privacy, refunds, delivery dates and liability in plain language. A consent dialog, a real DPO contact and terms grounded in the SLA keep the studio credible — and reduce disputes before they start.

Demonstrate

A full sample invitation shows the product better than any description: countdown, schedule, save-the-date, contact download and an RSVP with consent built in.

Stay honest

No fake testimonials, no invented client names, no stock photos passing as portfolio work. Sample content is labelled as sample until real events replace it.

02 · SITEMAP

Eleven destinations, one journey.

Navigation stays short: Home, Packages, Invitation, Site plan and Booking in the header. Legal pages live in the footer, where they belong, but every form links to them inline.

MARKETING

- Home /
- Packages & pricing /packages
- Booking request /booking

PROOF

- Sample invitation /invitation
- Site plan /site-plan

TRUST & LEGAL

- Privacy notice /privacy
- Service terms /terms
- Privacy dialog site-wide

SYSTEM

- 404 / not found /404
- Booking success state /booking
- RSVP success state /invitation#rsvp

03 · PAGE INTENT

What each page is for.

Each page has a single job and a single primary action. Anything that does not help that action is decoration — and decoration has to earn its place.

Home

Make the offer legible in ten seconds: what Aetheria Events makes, what it costs, and how quickly it arrives.

Primary CTA: Reserve your date → booking.

Packages & pricing

Turn the SLA into a decision. Three tiers, optional fees, a side-by-side comparison and honest policy notes.

Primary CTA: Book this plan (carries the plan into the form).

Booking

A short, low-friction request form — package, event, contact details, consent — with a live estimated total.

Primary CTA: Send booking request.

Sample invitation

Show, don't tell. A full event page with countdown, venue, schedule, save-the-date/contact and RSVP.

Guest CTA: Send my RSVP.

Privacy notice

Your defence and your promise: what is collected, why, who sees it, how long it is kept, and how to complain.

Contact the DPO / change privacy settings.

Service terms

A readable summary of the SLA: packages, delivery, revisions, refunds, data roles and liability.

Read the full agreement / book.

04 · JOURNEYS

Two people, two paths.

The site serves the organizer and the guest, and the two journeys must never confuse each other. The invitation lives on its own route with its own visual world.

Organizer → booking

- ✓ Arrives from social or referral; reads the home page.
- ✓ Checks prices and inclusions; opens the sample invitation.
- ✓ Clicks a plan; the package is pre-selected in the form.
- ✓ Completes the form, sees an estimate, consents to the privacy notice.
- ✓ Receives a reference and next steps; invoice follows by email.

Guest → RSVP

- ✓ Opens the event link from an invitation or QR.
- ✓ Reads the date, venue, dress code and schedule.
- ✓ Saves the date and the coordinator's contact.
- ✓ Replies with attendance, guest count and consent.
- ✓ Receives confirmation once the host accepts the RSVP.

05 · DESIGN SYSTEM

Celestial, restrained, legible.

Cormorant Garamond carries the romance; Jost keeps labels, forms and prices crisp.
Dark sections set the mood, ivory sections make reading and transacting easy.

Ink	Plum	Rose	Gold	Ivory
#0B0810	#3B2043	#C98D9E	#C3A05F	#F8F2E8
Primary background	Depth, gradients	Warmth, glow	Accents, CTAs	Light sections

Dusk
#9D91A3
Muted text

Moments that feel like destiny.

CORMORANT GARAMOND · JOST · LETTERSPACED LABELS

Body copy sits at 16–18px with 1.7 line height for comfortable reading. Forms keep labels above fields, visible focus rings and inline error messages that explain how to fix the problem.

DISPLAY · 300–400 BODY · 350–400 LABELS · 450–500 RADIUS · 12–42PX MOTION · 400–900MS

06 · PRIVACY & COMPLIANCE

Designed to be defensible.

The pop-up is not decoration. It records a choice, controls what loads, and links to a notice that names the DPO, the processors and the deletion date.

What is in place

- ✓ Consent dialog on first visit with Accept all / Essential only, stored in localStorage and reopenable from every footer.
- ✓ Privacy notice covering clients, guests and visitors, with DPO contact and NPC complaint route.
- ✓ Required consent checkboxes on booking and RSVP, plus an optional, unticked marketing box.
- ✓ Explicit "do not send" guidance for health, ID and financial data in forms.
- ✓ Retention language mirrored from the SLA: 6-day live window, 30-day archive, deletion on day 36.

Still required

- ⚠ Legal review of the privacy notice and terms by Philippine counsel.
- ⚠ A named DPO, a monitored inbox and a documented request/breach procedure.
- ⚠ Consent log retention evidence (dates, versions, choices) if analytics is enabled.
- ⚠ Signed processor agreements with Google, Cloudflare and Tally.
- ⚠ Automated deletion job with a guest-data-free deletion log.

What a pop-up can and cannot do. A clear notice and consent flow reduce risk and show good faith; they do not by themselves prevent a complaint or a suit. Pair them with actual minimisation, access control, a retention schedule and counsel-reviewed documents.

07 · CONTENT & ASSETS

What we still need from the client.

The site is complete with placeholders. Real photographs, contact details and reviewed legal copy are the difference between a demo and a launch.

Assets to supply

- ⚠ Vector logo files (SVG/AI/EPS) and any partner marks
- ⚠ Twelve to twenty real event photographs for the portfolio and page mock-ups
- ⚠ Confirmed brand palette and type preferences, if different from this direction
- ⚠ A real coordinator mobile number and social handles for the footer
- ⚠ Final domain name and Cloudflare/DNS access
- ⚠ Signed-off privacy notice and service terms, reviewed by counsel
- ⚠ Booking inbox address, plus the person who owns replies
- ⚠ Real packages, fees and lead times — currently taken from the SLA

Content decisions

- ✓ Keep the celestial palette, or switch to the client's existing brand colours.
- ✓ Keep the sample invitation as a permanent demonstration, or replace it with a real event.
- ✓ Publish the full SLA as a PDF, or keep the summary on this site only.
- ✓ Add a portfolio and testimonials only with written permission from clients.
- ✓ Confirm whether bookings require a deposit, and update the form copy accordingly.

08 · BUILD & INTEGRATIONS

How it runs.

The prototype is intentionally static: it can be reviewed anywhere, then wired to real endpoints without redesigning a thing.

Front-end

React + Vite single-page app. Static build, no server required to browse. Routes: home, packages, booking, invitation, privacy, terms, site plan, 404.

Booking endpoint

The form currently saves to the browser in preview. Before launch, POST submissions to a secure endpoint (Google Apps Script → Sheets, Formspree, or a Cloudflare Worker) and send an acknowledgement email.

Email & RSVP automation

Standard/Premium require guest confirmation emails and a dashboard. Tally + Google Sheets can run the pilot; a small Worker can handle accept/decline and seating.

Analytics with consent

Load analytics only when localStorage consent allows it (document.documentElement.dataset.consent === "all"). Prefer a privacy-friendly, cookieless tool.

Hosting & security

Deploy the static build to Cloudflare Pages behind the WAF, with bot protection on admin routes. Enable HSTS and a strict content security policy.

Data lifecycle

Automate the six-day lock, 30-day archive and day-36 deletion. Keep a deletion log with no guest data, and a named DPO for requests.

09 · LAUNCH

Before the doors open.

A short, non-negotiable checklist. Every item either protects a guest, protects the business, or protects the design.

Checklist

- ✓ Booking form connected and tested end to end (including error and success states)
- ✓ Privacy dialog appears once, records a choice, and can be reopened from every footer
- ✓ Privacy notice and terms reviewed by counsel; version and date updated
- ✓ DPO inbox tested and monitored; request process documented
- ✓ Analytics fire only after consent; no advertising or tracking pixels
- ✓ Meta titles, descriptions and social preview image set per page
- ✓ Keyboard-only pass and screen-reader spot check on forms, menus and dialog
- ✓ Lighthouse performance, accessibility and best-practice scores reviewed
- ✓ Every telephone number, email and address verified
- ✓ Sample invitation clearly labelled, or replaced with a real client event

Measure

- ✓ Booking form completion rate (starts vs. submits).
- ✓ Package page → booking click-through.
- ✓ Invitation RSVP completion and guest count accuracy.
- ✓ Enquiries per week, and time to first reply.
- ✓ Mobile share of traffic and mobile form errors.
- ✓ Consent choice split, to decide whether analytics is worth keeping.

Analytics is loaded only when the visitor allows it; numbers stay aggregate and anonymous.

10 · OPEN QUESTIONS

What we need to decide next.

These are the conversations that turn the prototype into the studio's real website.

Decisions

- ⚠ Legal copy is a good-faith draft based on the SLA — not legal advice.
- ⚠ The booking form has no server yet; submissions stay in the visitor's browser.
- ⚠ Event photography is represented by original code-drawn artwork until real photos are supplied.

Suggested sequence

1. Approve the direction and palette. 2. Send real photography and final contact details. 3. Connect the booking endpoint and test it. 4. Send legal copy for review. 5. Deploy to Cloudflare Pages, connect the domain, run the launch checklist.

Estimated handover: five working days after assets and legal sign-off.

READY TO REVIEW?

Walk the journey yourself.

Open the sample invitation as a guest, then send a booking request the way a client would. Both flows are fully interactive.

Prepared for Aetheria Events · Level 21, Park Triangle Corporate Plaza, North Tower, Bonifacio Global City, Taguig City · hello@aetheriaevents.com. This plan is a working document shared with the client; it is not a contract. Legal text on this site is a good-faith draft based on the Service Level Agreement and the Data Privacy Act of 2012 (RA 10173) and should be reviewed by counsel before publication. The full SLA remains the governing document for all bookings.
